

Over 500 of Canada's leading scientists are worried because  
**CLIMATE CHANGE IS HAPPENING  
 FASTER THAN PREDICTED**  
 and Canada is not doing nearly enough.

Canada ranks last among the G8 nations in tackling climate change.  
 We must make a strong commitment at the UN Climate Change Summit.

Leaders in Canada's scientific community tell us that climate change is advancing faster than previously projected. The impact of these effects are overshooting even the worst-case scenarios that were projected just two years ago. This is why over 500 of Canada's top scientists have signed their names to a letter urging Prime Minister Stephen Harper and

responsibility to meet this challenge. We need the Government of Canada to be our voice at the United Nations Climate Change Summit in Copenhagen, and to be a global leader, as the longer we delay taking action on dangerous climate change, the more costly it will become, both financially and environmentally, not only for us, but for future generations.
